

Georgia Families Psychological and Neuropsychological Test Administration Time

This list represents some of the most common psychological and neuropsychological assessment measures, but may not represent every measure available. Tests in *Print IX* and select test publisher guidelines were utilized in determining the overall time allotment for each test listed below. The times listed below are for administration only. Time for writing, scoring and interpretation are calculated separately. This list serves as a guideline to determine appropriate time allotments for each measure; however, it does not reflect all circumstances that may influence test administration times. The measures listed below do not guarantee coverage or payment. This is determined by consideration of clinical factors supporting the medical necessity of the testing request. Please refer to psychological and neuropsychological testing criteria for further information.
